

# 2020 U.S. Product Guide

Hydro-Gear® is a registered trademark of Hydro-Gear Inc.

Kawasaki® is a registered trademark of Kawasaki Motors Corporation.

Briggs & Stratton® and Vanguard® ride mower engine power levels are stated gross horsepower at 3600rpm per SAEJ1940.

Briggs & Stratton walk-behind engine power levels are stated gross torque at 2600 RPM per SAE J1940.

The SAE J1349 standard measures net horsepower with the manufacturer's production muffler and air cleaner in place. Net horsepower more closely correlates with the power the operator will experience, when using a Honda engine powered product. The power rating of the engines indicated in this document measures the net power output at 3600 rpm (7000 rpm for model GXHSO, GXVSO, GX2S and GX3S) and net torque at 2500 rpm, as tested on a production engine. Mass production engines may vary from this value. Actual power output for the engine installed in the final machine will vary depending on numerous factors, including the operation speed of the engine in application, environmental conditions, maintenance and other variables.

Only Kawasaki Critical Power engines listed in this brochure have been tested in accordance with SAE J1995, verified by TÜV Rheinland Group, horsepower-rated in accordance with SAE J2723, and certified by SAE International. Torque ratings of these engines were not certified by SAE. Actual power and torque output will vary depending on numerous factors, including, but not limited to, the operating speed of the engine in application, environmental conditions, maintenance, and other variables.

See operator's manual or [www.snapper.com](http://www.snapper.com) for complete warranty details. Length of engine warranty coverage varies by manufacturer.

Briggs & Stratton Corporation has a policy of continuous product improvement and reserves the right to modify its specifications at any time and without prior notice. Product may vary from images shown.
